

# Synthesizing Personalized Construction Safety Training Scenarios for VR Training

Wanwan Li, Haikun Huang, Tomay Solomon, Behzad Esmaeili, and Lap-Fai Yu

*George Mason University*

(a) Virtual Construction Site

(b) Generate Navigation Mesh

(c) Generate Path Graph

(d) Define Hazard Candidates

(e) Synthesized Scenario for Personalized Training

# Overview of our Approach

(a) Pre-evaluation

(b) Synthesizing Personalized Training Scenarios

(c) Training in Virtual Reality

(d) Post-evaluation

# Struck-By

# Fall Hazard

# Caught-In

# Electrocution

Minimizing Total Cost

## Cost Functions

**Overall Cost.**  $C_{\text{total}}(R, H) = w_D C_D(R, H) + w_S C_S(R, H) + w_T C_T(R, H),$

## Cost Functions

**Overall Cost.**  $C_{\text{total}}(R, H) = w_D C_D(R, H) + w_S C_S(R, H) + w_T C_T(R, H)$ ,  
**Dynamic Hazard Cost.**

$$C_D(R, H) = 1 - \exp\left(-\left(\frac{D(R, H) - \rho_D}{\sigma_D}\right)^2\right),$$

$$D(R, H) = \frac{k}{|R|} \sum_{i=1}^{|H|} \int_R \Pr(H_i | d(\mathbf{r}, H_i) < \delta(H_i)) d\mathbf{r}$$

$$\Pr(H_i | d(\mathbf{r}, H_i) < \delta(H_i)) = \frac{T_{d(B_i, H_i) < \delta(H_i)}}{T_{d(B_i, H_i) < \delta(H_i)} + T_{d(B_i, H_i) \geq \delta(H_i)}}$$

## Cost Functions

**Overall Cost.**  $C_{\text{total}}(R, H) = w_D C_D(R, H) + w_S C_S(R, H) + w_T C_T(R, H),$

## Cost Functions

**Overall Cost.**  $C_{\text{total}}(R, H) = w_D C_D(R, H) + w_S C_S(R, H) + w_T C_T(R, H),$

$$C_S(R, H) = 1 - \exp\left(-\left(\frac{S(R, H)}{\sigma_S}\right)^2\right),$$

**Static Hazard Cost.**

$$S(R, H) = \frac{1}{M} \sum_{j=1}^M \left( \frac{k}{|R|} \sum_{i=1}^{|H|} \int_R F_j(\mathbf{r}, H_i) d\mathbf{r} - \lambda_j \right)^2$$

## Cost Functions

**Overall Cost.**  $C_{\text{total}}(R, H) = w_D C_D(R, H) + w_S C_S(R, H) + w_T C_T(R, H),$

## Cost Functions

**Overall Cost.**  $C_{\text{total}}(R, H) = w_D C_D(R, H) + w_S C_S(R, H) + w_T C_T(R, H),$

**Training Time Cost.**

$$C_T(R, H) = 1 - \exp\left(-\left(\frac{T(R, H) - \rho_T}{\sigma_T}\right)^2\right),$$

$$T(R, H) = k_1 \frac{1}{v} \int_R d\mathbf{r} + k_2 \sum_{i=1}^{|H|} T(H_i)$$

# Optimization

(a) The 1<sup>st</sup> iteration.

(b) The 100<sup>th</sup> iteration.

(c) The 200<sup>th</sup> iteration.

(d) The 500<sup>th</sup> iteration (Result).

*Add a Vertex*

*Remove a Vertex*

*Modify a Vertex*

*Add a Hazard*

*Remove a Hazard*

*Modify a Hazard*

$$\Pr(R', H' | R, H) = \min\left(1, \frac{f(R', H')}{f(R, H)}\right),$$

$$f(R, H) = \exp\left(-\frac{1}{t} C_{\text{total}}(R, H)\right)$$

**Fall Hazard**

**Caught-In**

**Electrocution**

**Fall Hazard**

**Caught-In**

**Electrocution**

**Fall Hazard**

**Caught-In**

**Electrocution**

**Fall Hazard**

**Caught-In**

**Electrocution**

(a) Synthesized route with fewer hazards.

(b) Synthesized route with more fall hazards.

(c) Synthesized route with more caught-in/between hazards.

(d) Synthesized route with more electrical hazards.

(e) Synthesized route with more struck-by hazards.

(f) Synthesized route with all types of hazards.
