

Visual Recreation with *Data* and *Physics*

Shenlong Wang

Apr 2, 2024

Immersive experience for “what if” questions.

What if...

Immersive experience for "what if" questions.

What if... **driving at night?**

Immersive experience for "what if" questions.

What if... **jaywalkers present?**

Immersive experience for "what if" questions.

What if... **driving on a smoggy day?**

Immersive experience for "what if" questions.

What if... **the street is covered by snow?**

Immersive experience for "what if" questions.

What if... **the street is flooded?**

Recreative mind [1]

Perceive the
Physical World

Recreate
Experiences

.....

Recreative imagination: an ability to experience or think about the world from a perspective different from the one that experience presents -- Gregory Currie and Ian Ravenscroft (2002)

Recreative mind [1]

Perceive the
Physical World

Recreate
Experiences

Goal: make computers to **imagine** in the **physical world**.

origin flood

smog snow

Simulation

Healthcare

Entertainment

What we have done so far

Physical simulation can simulate, but it is not based on real scenes, and necessitates user-created assets.

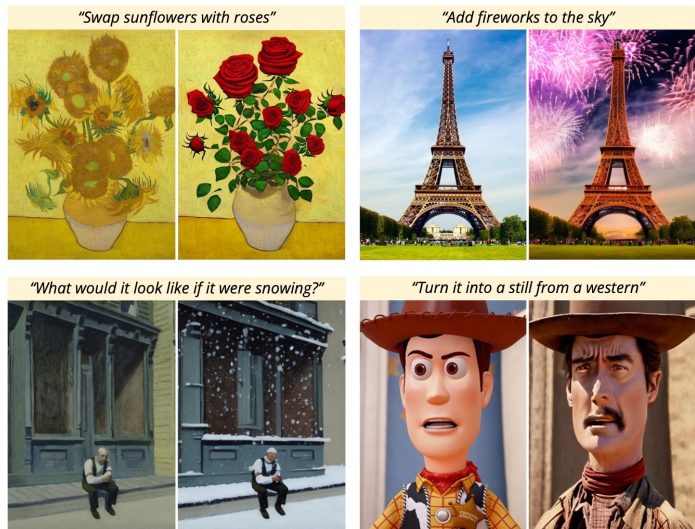

What have done so far

Video Effects (VFX): can be ultra realistic but requires professionals.

What we have done so far

Generative models can edit but are data-hungry and lack physical grounding.

What we have done so far

(Neural) 3D modeling can encode rich appearance, geometry and semantics, but has limited editability.

Key insights

Data-driven

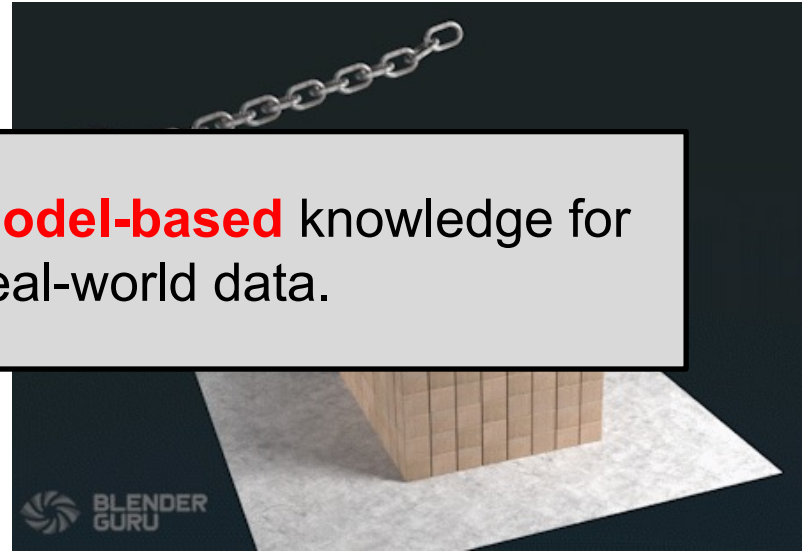

Model-based

Key insights

Data-driven

Model-based

Approach: **data-driven** and **model-based** knowledge for simulation over real-world data.

Can we simulate from and to the reality?

Lighting

Dynamics

Relighting

Key challenge: relightable scene representation

Object-level, surrounding views

(a) Input images

(b1) Albedo

(b2) Roughness

(b3) Shape & lighting

(c1) Novel view

(c2) Relit 1

(c3) Relit 2

Multi-illumination or known geometry

Key challenge: relightable scene representation

Object-level, surrounding views

Multi-illumination or known geometry

(a) Input image

Goal: **relightable** large scene models from a single monocular video.

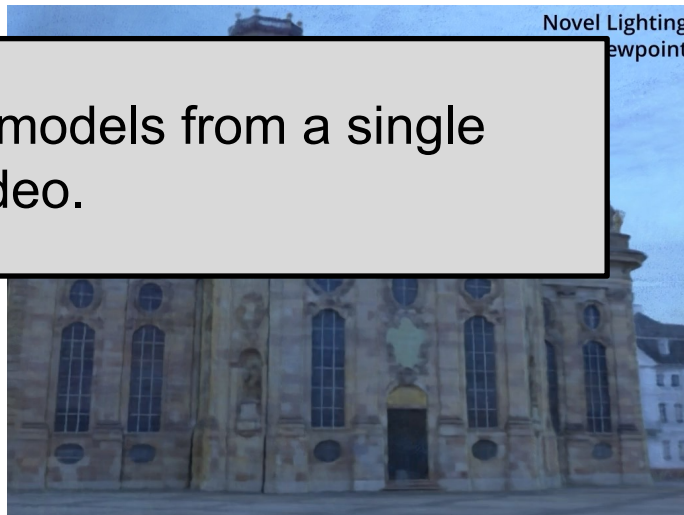

(c1) Novel view

(c2) Relit 1

(c3) Relit 2

Novel Lighting
Newpoint

UrbanIR: Urban Scene Inverse Rendering

- Data-driven **monocular cues** provide strong prior / regularization

- Explicit modeling **physics** of **shadow** improves geometry

Reconstruction

Can we model and simulate weather effects?

Style image

Multi-view Input Images

3D Scene Modeling

Neural Scene Stylization

Physical-Inspired Simulation

Controllability

Possible to incorporate realistic weather projection

Can we simulate dynamic actors?

Input Video

Simulated Results

Reconstructed Object

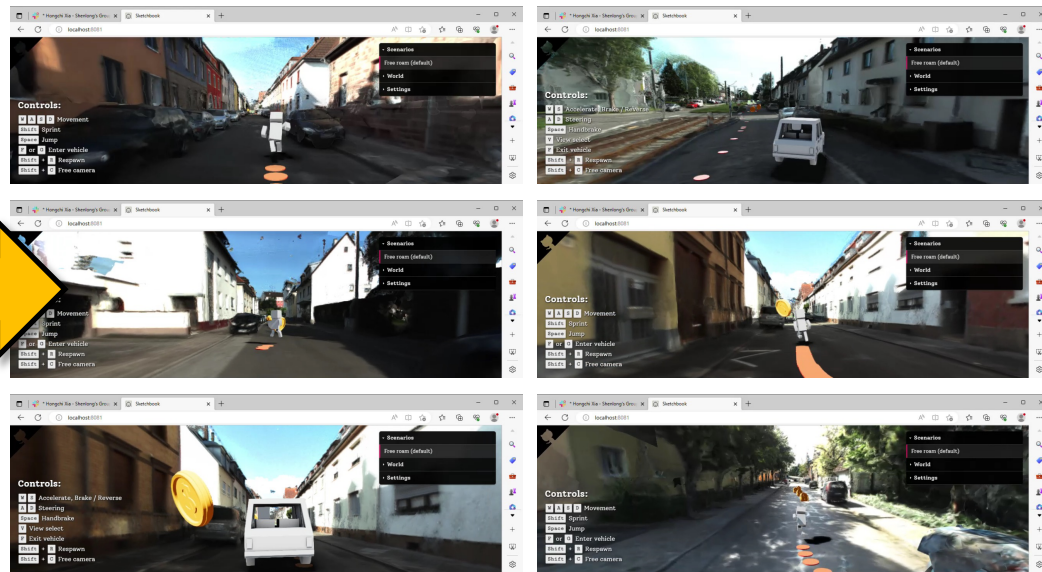

Can we turn a video to a game?

Input: single video

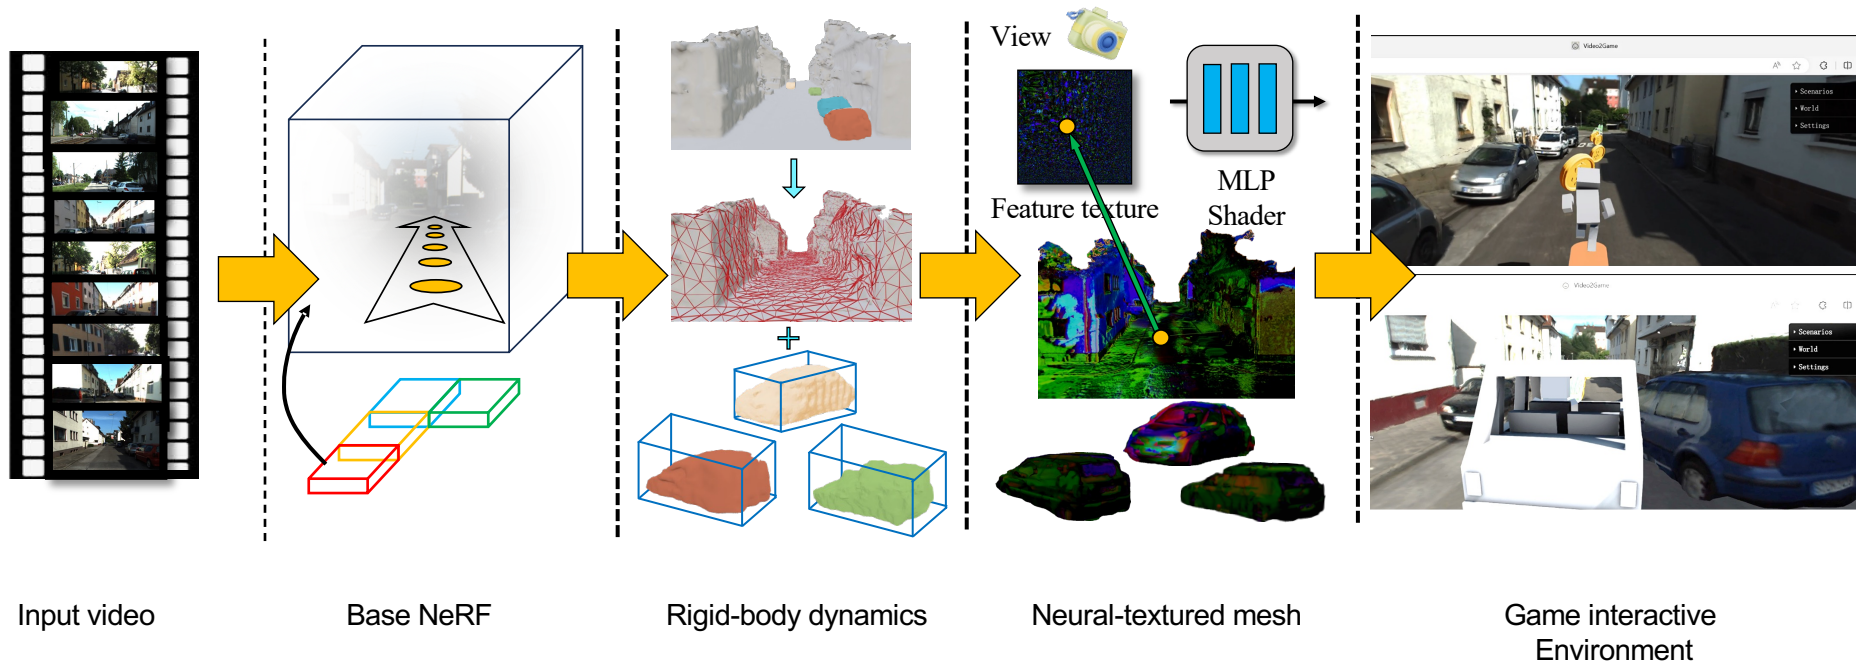

Output: real-time, realistic, interactive environment

Motivation: everything comes with a price tag

Overall framework

Hit the Vase!:
Score: 0
Balls shot: 0

231 FPS (1-241) 4 MS (1-2267) 667 MB (157-672)

- Scenarios
- Settings

Controls:
W A S D Movement
